

Stocktake

Balancing Supply and Demand

A monitoring package that 'takes stock' of your grazing resources and points to improved management decisions.

Key Features

- Paddock based assessment with recognition of the different land types within the paddock.
- Grazing land monitoring in terms of ecosystem health and long-term paddock productivity.
- Managing and interpreting data in a way that is useful for business planning.
- Quantifying the potential for improvement in productivity
- Forage budgeting. E.g. How long is the feed going to last with the present number of cattle / sheep in the paddock?

Potential Workshops

- Workshops are designed so they can be held at a variety of locations; either on-property or in centrally located towns or communities.

Workshop cost

- The *Stocktake* workshop is a one-day course which costs \$330 per business (including GST). This cost covers the course, all resource materials, morning and afternoon teas and lunch.
- *Stocktake* is FarmReady approved # FTTC0272 - see www.farmready.gov.au for information.
